

HOW CAN WE SYNC CALENDAR FEEDS ON ANDROID DEVICES?

Unfortunately, Android OS does not synchronize with iCal by default. However, there is a free application on Google Play Store that enables iCal feeds on Android phones.

Steps:

1. Download and Install ICalSync application from here <https://play.google.com/store/search?q=ICalSync+khoas&c=apps>
2. Run ICalSync app on the Android phone; it will give you an option to go to "Show Sync Accounts"
3. Click on "Add account".
4. Select ICalSync2.
5. Enter Name and other details. In "choose URL" enter the iCal URL copied from the website
6. Set synchronize time to 1 hour and save.
7. You will start seeing all your appointments directly in your mobile device's native calendar. You can even customize settings to get an alert prior to appointments.
